
EOQualifierEvaluation

Adopted By: EOKeyValueQualifier
EOComparisonQualifier
EOAndQualifier
EOOrQualifier
EONotQualifier

Protocol Description

The EOQualifierEvaluation protocol defines a method, **evaluateWithObject:**, which performs in-memory evaluation of qualifiers. All qualifier classes whose objects can be evaluated in memory must implement this protocol.

Instance Methods

evaluateWithObject:

– (BOOL)**evaluateWithObject:***object*

Returns YES if the argument *object* satisfies the qualifier, NO otherwise. This method can raise one of several possible exceptions if an error occurs, depending on the implementation.
