
EObserverProxy

Inherits From:	EODelayedObserver : NSObject
Conforms To:	EObserver (EODelayedObserver) NSObject (NSObject)
Declared In:	EOControl/EObserver.h

Class Description

EObserverProxy provides a means for objects that can't inherit from EODelayedObserver to handle **subjectChanged** messages. An EObserverProxy implements **subjectChanged** to send an action message to its target object, allowing the target to act as though it had received **subjectChanged** directly from an EODelayedObserverQueue. See the EObserverCenter and EODelayedObserverQueue class specifications for more information.

Instance Methods

initWithTarget:action:priority:

– (id)initWithTarget:(id)anObject
 action:(SEL)anAction
 priority:(EOObserverPriority)priority

Initializes a new EObserverProxy to send *anAction* to *anObject* upon receiving a **subjectChanged** message. *anAction* should be a selector for a typical action method, taking one **id** argument and returning **void**. *priority* indicates when the receiver is sent this message from EODelayedObserverQueue's **notifyObserversUpToPriority:** method. This is the designated initializer for the EObserverProxy class. Returns **self**.
